

ANSA QUEENSLAND BRANCH INC

ELIGIBLE SPECIES LIST

1. Eligible species herein are listed in alphabetic order according to the first common name specified in the references used.
2. Common names have recently been standardised across Australia, so therefore some of the common names will be varied slightly. The Standard name has been substituted where required and the previous common name will still be included in brackets to help with the transition to the standard common name.
3. Where possible all the species available to Queensland anglers are now listed with both Common and Scientific names. The terms "ALL SPECIES" and "OTHER SPECIES" are only used where there are possibly more species available eg. Wrasses/Trevallys. Species are separated where different legal sizes/fight factors occur.
4. The references used are E.M. Grant's "Guide to Fishes", "Fishes of the Great Barrier Reef and Coral Sea" by J.E. Randall, G.R. Allen and R.C. Steene, "Marine Fishes of Tropical Australis and South East Asia" by G. R. Allen and "Freshwater Fishes of Australia" by G.R. Allen, S.H. Midgley and M. Allen, and Fish Identification as per DEEDI Fisheries website www.dpi.gov.au/28_630. as the standard references.
5. **SPECIAL NOTE:**
 - a) Some species included are not eligible for National Record and Masters Award claims but are eligible for Queensland Records and Masters and are indicated by a "Q".
 - b) Certain species in the National Eligible Species List have been excluded due to their absence from Queensland waters.

The size and bag limits that are stated below are subject to constant review by the Queensland Fisheries Service and other state or federal bodies.

Please be aware of these changes when they occur and abide by the changes to size and bag limits. Many areas and species now have seasonal closures as well eg. Coral Reef Fin Fish closures and are marked(SC). Fisheries laws can change at any time.

ANSA Qld Inc. will not be responsible for any member who breaks Fisheries laws.

There are slight changes to fisheries regulations while fishing in stocked impoundments eg. you may have one barramundi in your possession during the closed season and that fish may be over 120cm **only if you catch the fish in a stocked impoundment.**

Note; Fish need to be tagged before leaving a stocked impoundment in some areas.

A combined take and possession limit of 20 will apply to coral reef fin fish (as listed in the Fisheries 'Coral Reef Fin Fish' management plan 2003), however within this combined limit, anglers must comply with individual take and possession limits for various fish species.

Please note: Gold Spot and Black Spot Cod are now listed as Coral Reef Finfish Species. They will be included in the Reef closures and will need to have their fin clipped.

N.B. Please make yourself fully aware of the current regulations and any amendments.

This list now contains the Freshwater Species that attain a length of greater than 200ml. Some now regulated Freshwater species do not appear on this list because they do not reach 200ml. Please check against Fisheries Regulations.

Species with no Length or Factor are not Regulated fish and are therefore No Take species for ANSA Qld. These species are listed for identification purposes only.

(SC) Left Column means this species has a Seasonal Closure

RECORDS & TAGGING	SPECIES	SUB SPECIES (Tag Pts)	SCIENTIFIC NAME	LENGTH Min / Max	FACTOR	BAG LIMIT
